PORTFOLIO WEBSITE IMPROVEMENT GUIDE

Prepared for Dikshit Solanki | Based on the supplied website screenshots and résumé

Main recommendation
Keep the current dark visual style, bold typography, and orange accents, but reposition the website around the work and services actually supported by the résumé: content creation, video editing, graphic design, YouTube thumbnails, research/writing, and AI-assisted creative production.

Purpose of this guide

This document provides a practical change list, replacement website copy, recommended sections, project presentation guidance, contact and résumé updates, and a final launch checklist. It is intended to be used as a brief while editing the existing website.

Important accuracy rule: do not claim seniority, client relationships, testimonials, results, or brand partnerships unless you can substantiate them. Label personal or AI concept projects clearly.

1. Current website: what to keep and what to change

What is already working

• Dark background with a premium look.
• Strong, oversized typography that creates a clear visual hierarchy.
• Orange accent color for calls to action and small highlights.
• A simple top navigation and visible contact button.
• Large project cards that can be reused for real portfolio pieces.

What needs changing

Current element	Recommended change	Reason
“Creative Director” headline	Use “Content Creator & Visual Designer” or “Content Creator | Video Editor | Graphic Designer.”	Matches the résumé without implying unsubstantiated senior leadership.
Brand strategy / identity / packaging / creative direction labels	Replace with Video Editing, Thumbnail Design, Graphic Design, and AI Creative Production.	These reflect the skills listed in the résumé.
Product-designer description	Replace with a short description of creating videos, thumbnails, promotional graphics, and digital content.	The résumé does not list product/UI design as a core service.
Fashion, headphones, skincare image cards	Use real examples of your own work: video edits, thumbnails, business graphics, and AI product ads.	Visitors should see evidence of the work you offer.
“Trusted by Brands I’ve Helped Shape” strip	Remove it unless the brands and relationship are genuine and you have permission to show them.	Avoid unsupported social proof.
“Folioblox” logo	Replace with your name or a simple “DS” monogram if Folioblox is only a template/demo name.	Make the site clearly yours.

2. Recommended website structure

Use this order so a visitor understands who you are, sees proof of your work, and can contact you without hunting for information.

1. Header: Name/logo, Work, Services, About, Contact, plus a clear contact button.
2. Hero: Professional title, one-sentence value proposition, View My Work and Contact Me buttons.
3. Selected Work: 4–8 of your strongest projects, each with a category and short explanation.
4. Services: The exact work clients can hire you for.
5. About: Your approach, skills, and the process you can handle.
6. Process: Brief → Research/Ideas → Creation → Review → Delivery.
7. Testimonials or proof: Only genuine feedback or verifiable results; omit if unavailable.
8. Contact: Email, WhatsApp or a working contact form, plus relevant social links.
9. Footer: Name, copyright year, and links.

3. Ready-to-use website copy

Hero section

Headline: I Create Content That Gets Noticed.

Intro: I’m Dikshit Solanki, a content creator, video editor, and graphic designer. I turn ideas into engaging videos, eye-catching thumbnails, and creative visuals for digital platforms and businesses.

Primary button: View My Work
Secondary button: Contact Me

Alternative headline if you want a more direct professional style

Content Creator | Video Editor | Graphic Designer

About section

I’m a creative professional with practical experience in YouTube content creation, video editing, thumbnail design, promotional graphics, research, writing, and AI-powered creative tools. I enjoy handling the creative process from researching ideas and developing concepts to producing polished visual content for creators, individuals, and businesses.

Services section

Video Editing
Editing YouTube videos and short-form content with a focus on clear pacing, storytelling, and presentation.

YouTube Thumbnail Design
Designing thumbnails that communicate a video’s idea clearly and fit its intended audience.

Graphic Design
Creating and redesigning posters, flyers, promotional graphics, and business visuals while preserving the required business information.

AI Creative Production
Using AI image and video generation tools and prompt writing to develop visual concepts and creative assets.

Content Research & Writing
Researching topics, developing content ideas, and writing material for digital content.

Call-to-action section

Have a project in mind?
Tell me what you’re creating and what you need. I’m open to video editing, thumbnail design, graphic design, and content production projects.

Use these drafts as a starting point. Keep only services you are ready to deliver confidently, and adjust the wording to reflect your actual experience.

4. Portfolio projects: what to show

Prioritize quality over quantity. Start with 4–8 strong projects, then expand as you create more work. Use actual project files or published links, not unrelated stock photos.

Recommended project categories

Project A — YouTube Thumbnail Design
Show the thumbnail at a readable size. Add the video topic, your contribution, and a link to the video if public.

Project B — Video Editing
Embed the finished video or show a short preview. State whether you edited the full video, short-form clips, captions, pacing, or other specific parts.

Project C — Business Poster / Flyer Redesign
Show a before-and-after comparison. Preserve all business details accurately. Explain the design changes, such as hierarchy, readability, spacing, or visual consistency.

Project D — AI Product Advertisement
Show the final ad and, where useful, the product reference and a few production steps. Mark it as a concept project if it was not commissioned by the brand.

Project E — Content Research & Writing
Show a short excerpt, outline, or published video with a clear explanation of your role.

Project F — Social Media / Promotional Graphics
Display a small coordinated set rather than a random collection of unrelated designs.

Template for every project card or case study

Project title
Category: Video Editing / Thumbnail Design / Graphic Design / AI Creative Production
Objective: What the piece needed to achieve.
My role: Exactly what you personally did.
Tools: List only tools actually used.
Process: Briefly explain key creative decisions.
Deliverable: What you produced.
Result: Include only measured, verifiable outcomes. If no outcome data exists, omit this field.

Do not invent clients, views, conversion rates, testimonials, or business outcomes. If a project is self-initiated, label it “Personal Project” or “Concept Project.”

5. Visual design guidance

Keep the existing dark and premium style; it does not need a complete redesign.

• Background: near-black or charcoal.
• Main text: white or warm off-white.
• Accent: keep the orange/red used for buttons and highlights.
• Typography: one strong display font for headings and a highly readable font for body text.
• Spacing: allow generous space between sections and avoid crowding text over the hero image.
• Images: use consistent aspect ratios and crop styles; compress images for faster loading.
• Motion: use subtle transitions only when they improve navigation or presentation.
• Hero image: use a professional photo of yourself if you want a personal brand, or a custom visual that represents your creative work. Make sure the text remains readable.

6. Contact, résumé, and credibility

Your supplied résumé lists B.Sc. B.Ed. at Jai Narain Vyas University (JNVU), Jodhpur, Rajasthan, and describes self-managed YouTube channels plus design projects for individuals and businesses. Use those details consistently across your About page and résumé.

Contact details that must be fixed

The résumé currently contains placeholders: [Your Phone Number], [Your Email], and [Add Link]. Replace these with the correct details before sharing the résumé or publishing the portfolio. Do not publish private contact information you do not want public; a dedicated professional email or contact form is an alternative.

Useful buttons and links

• Download Résumé — link to the final PDF.
• YouTube — link to relevant channel(s) or specific work.
• Email Me — open a mail composer using your actual email address.
• WhatsApp — optional, using a link you have tested.
• LinkedIn or other professional profile — include only if maintained and relevant.

Credibility rules

• Use real client names/logos only with permission.
• Use testimonials only when genuine and approved for display.
• Explain your role accurately when work was collaborative.
• Distinguish AI-generated concepts from commissioned campaigns.
• Avoid vague claims such as “trusted by leading brands” unless you can prove them.
• Do not add skill bars or ratings that imply a precise proficiency level without a useful basis.

7. Technical and mobile checks

• Test the site on both a phone and a desktop.
• Make sure navigation links scroll to the correct sections.
• Test all buttons, email links, WhatsApp links, embeds, and résumé downloads.
• Ensure text is readable over images and the hero works on smaller screens.
• Compress large images and videos; use thumbnails or embeds for heavy media.
• Add page title and meta description that describe your actual services.
• Add descriptive alt text to meaningful images.
• Check spelling, grammar, broken links, and empty sections.
• Replace the local development URL (localhost:3000) with a deployed public website address before sharing it with clients.

8. Suggested page title and SEO description

Page title: Dikshit Solanki | Video Editor, Content Creator & Graphic Designer

Meta description: Explore Dikshit Solanki’s portfolio of video editing, YouTube thumbnails, graphic design, promotional visuals, content creation, and AI-assisted creative projects.

Use only relevant keywords naturally. SEO cannot compensate for weak examples or an unclear offer.

9. Priority checklist

1	Replace “Creative Director” with a résumé-aligned title.
2	Rewrite the hero description and About section.
3	Replace brand strategy/product design labels with your actual services.
4	Replace unrelated sample images with your real projects.
5	Remove unsupported brand-trust claims.
6	Create 4–8 project cards with clear categories and your role.
7	Add a Services section and a visible Contact section.
8	Fix the résumé’s contact placeholders and link the final PDF.
9	Test the mobile layout, links, loading speed, and downloads.
10	Deploy the website and test the public URL before sharing it.

Final direction

The existing design can be retained. The most important improvements are accurate positioning, relevant work samples, clear service descriptions, and trustworthy proof. Make the website answer three questions within seconds: What do you do? Can I see examples? How do I contact you?

Prepared from the supplied website screenshots and résumé. The recommendations are editorial guidance; they do not claim that any example images shown in the conversation are the user's own work.
